

# Our purpose is to create a safer and less uncertain world

Beamex is a trusted partner for calibration excellence, providing accurate measurements, reliable data, and traceability for a safer and less uncertain world. Beamex helps improve efficiency, ensure compliance, and increase safety with its comprehensive ecosystem of calibration solutions – from field calibration to workshop calibration, calibration management, and services.

## Who we are

12 countries

300+ employees

80+ distributors

Everything we do, from buying food to driving a car or taking medicine, is dependent on precision measurements. Accurate measurements ensure that we get the right amount of food, fuel, and energy and that our medication is safe. They ensure our society functions well at all levels.

Calibration is key to ensuring that measurements are accurate and reliable, helping to improve efficiency, compliance, and safety while minimizing emissions, waste, and risks. Beamex precision calibration technology makes the world a safer and more sustainable place, with trustworthy measurements that are transparent and available for all.

## Our offices

## Our customers

15,000+ customers

140 countries

Beamex has more than 300 employees in 12 countries around the globe. In addition to our HQ and manufacturing facility in Finland we have Country Business Units in the Canada, France, Germany, United Kingdom, United States, Sweden, China, Netherlands. We also have Regional Business Units in United Arab Emirates, India and Saudi Arabia.

Today more than 15,000 companies in 140 countries are using Beamex technology to calibrate their process instruments and manage their calibrations. Our largest global software customer uses Beamex calibration management software at 175 different sites in 24 countries.

## What our customers say

“

Only a correct calibration ensures a proper and accurate measurement. We calibrate process instruments with portable calibrators, benches, calibration management software, and calibration standard procedures for field calibration and/or workshop calibration. The calibration has become efficient, reliable, and an easy way to reduce costs and procedures.”

**Salvador Mendez, Engineering Automation projects coordinator, Nestlé México**

“

Information is available at your fingertips in order to make quick decisions about the overall calibration status of the instrumentation. The mobile electronic component of Beamex allows technicians to focus on their work without the hassle of paper and other distractions. Beamex CMX Calibration Management Software has proved to be both robust and reliable without much required maintenance at our facility for more than three years.”

**Boehringer Ingelheim, USA**

“

Using Beamex LOGICAL Calibration Management Software has allowed us to switch to fully paperless calibration certificates, which means our field service technicians are approximately 30 to 40% more efficient. Automating our calibration process has also helped reduce potential errors.”

**Richard O'Meara, Contracts Manager at Douglas**

## What we offer our customers and partners

### A BETTER WAY TO CALIBRATE

Intuitive user experiences and world-class customer care to make calibration easy for everyone.

A continuously developing ecosystem of state-of-the-art technology and services to cover all calibration needs.

Expert support from a dedicated, highly knowledgeable team means a great experience every time.

### A BETTER WAY TO RUN A BUSINESS

Make smarter decisions and do smarter business with a lifecycle partner that helps optimize processes and operations and mitigate risks.

Get more from calibration data by connecting it to other business processes, helping to improve plant availability and capacity, for example.

Reduce error, improve efficiency, and ensure compliance with consistently accurate automated calibration processes.

### A BETTER WAY TO A SUSTAINABLE FUTURE

Improve quality and compliance with trustable and traceable measurement data and our deep knowledge and expertise.

Future-proof operations with high-quality, reliable, and accurate calibration solutions.

Optimize processes to reduce production losses, improve efficiency, and reduce waste and emissions.
