

BEAMEX QUALITY POLICY

Beamex exists to provide a better way to calibrate. We create customer value through technology and services that improve how calibration is performed and managed. At Beamex, quality is an integral part of our daily operations and a cornerstone of our ambition to be recognized and trusted as the No. 1 calibration company in the world.

Beamex develops, manufactures, and markets high-quality calibration equipment, software systems, and services for the calibration and maintenance of process instruments, helping customers worldwide ensure and maintain traceable measurements. As calibration is based on credibility, both delivered and perceived quality must never be compromised in any part of our operations. This requires everyone to be engaged, understand their role in achieving our quality objectives, and be empowered to act in a way that meets or exceeds customer expectations and reflects the Beamex brand.

Our quality policy summarizes our commitment to:

- developing and maintaining a quality culture that supports products and services trusted and preferred by our customers;
- complying with applicable laws, regulations, and internal requirements;
- continuously challenging and improving our systems and procedures; and
- ensuring that quality responsibilities are understood, promoted, and actively supported by all employees.

Managers at all levels are responsible for measuring, reviewing, and taking action to improve quality performance systematically and continuously. Employees, suppliers, partners, and other interested parties together contribute to the Beamex Quality. With Beamex core KPIs, we continuously measure key indicators such as customer satisfaction, process performance, employee learning and professional growth, innovation capability, and the financial performance of the Beamex Group.

The Beamex ISO 17025 accredited laboratory plays a vital role in our strategy by ensuring that our calibration capabilities meet the required quality level and by providing independent monitoring of our product quality.

The Beamex Quality Management System is described in detail on our intranet, where all personnel can easily access quality-related documents, process descriptions, and instructions. The quality manual for the accredited calibration laboratory is also available through the intranet.

Governance

Director, ICT & Management Systems, supported by the Beamex Management Systems team, is responsible for the implementation, monitoring, and maintenance of this policy.

This policy applies to the entire Beamex Group and is reviewed annually by top management as part of the Management Review process to ensure its relevance, effectiveness, and compliance with applicable legal and other requirements.
