

CUSTOMER TESTIMONIAL

beamex

zoetis

FOR ANIMALS. FOR HEALTH. FOR YOU.

THE COMPANY

Zoetis is a global animal health company that manufactures and delivers quality medicines, vaccines and other pharmaceuticals for those who raise and care for animals.

THE CHALLENGE

Using a manual paper based system, meant a high volume of manual data entry and repetition of tasks within the calibration process such as error calculation and certificate generation. This process was inefficient, prone to error and created challenges during regulatory inspections and audits.

THE SOLUTION

Beamex MC6 Multifunction Calibrator
Beamex MC6-Ex Intrinsically Safe Field Calibrator
CMX Calibration Management Software

THE BENEFITS

All instrument data is now stored digitally in the CMX Calibration Database and transferred electronically to the MC6/MC6-EX calibrator, which automates the test and error calculation, and digitally documents the calibration result data at the point of test. This data is then electronically transferred back into the CMX software for approval and closure. This has improved process efficiency along with data integrity, to ensure full 21 CFR Part 11 compliance.
